- 1 Introduction
- 2 Methodology
- 3 Results
- 4 Conclusions and Future Work

# 1 - Introduction

---

*Urban informatics is the study, design, and practice of urban experiences across different urban contexts that are created by new opportunities of real-time, ubiquitous technology and the augmentation that mediates the physical and digital layers of people networks and urban infrastructures.*  
(Foth, Choi, and Satchell 2011).

## Problem Statement

- ❑ Video analytics techniques for urban mobility analysis: understanding potential and implications

## Aim of the Study

- ❑ Characterise urban places and their users

- ❑ Analyse the **distribution** of the pedestrians using specific urban planning metrics
- ❑ Identify different categories of pedestrians: **commuters and tourists**
- ❑ Investigate the presence or absence of **groups** of pedestrians

## 2 - Methodology

---

Model Selection  
and Dataset  
Collection

Model Training

Detection and  
Tracking

Georeferencing

Urban Analytics

## Computer Vision Algorithms

- ❑ Object Detection: *YOLO models*
- ❑ Object Tracking: *SORT models*

## Datasets

- ❑ Training Dataset: *CGMU Montréal CCTV*
- ❑ Inference Dataset: *Piazza Duomo CCTV*

## Object detection: YOLOv5 and YOLOv7

YOLOv5

$mAP_{0.5}$	<i>precision</i>	<i>recall</i>
0.866	0.845	0.798

YOLOv7

$mAP_{0.5}$	<i>precision</i>	<i>recall</i>
0.874	0.860	0.799

CGMU Montréal CCTV Dataset

## Untrained model

## Trained model

## Object Tracking: SORT and StrongSORT

Execution time

*YOLOv7 +  
SORT*

23 ms/frame

*YOLOv7 +  
StrongSORT*

4800 ms/frame

- ❑ Georeferencer QGIS plugin
- ❑ Thin Plate Spline algorithm
- ❑ 354 Ground Control Points

*Piazza Duomo CCTV frame*

*Piazza Duomo WGS84/UTM32N (EPSG: 32632)*

*Georeferencing result*

## Point Pattern Analysis

- ☐ Distribution map, Descriptive statistics
- ☐ Quadrat analysis
- ☐ Heatmap, KDE heatmap
- ☐ Standard metrics calculation  
(Occupancy, Density, Flow Rate)

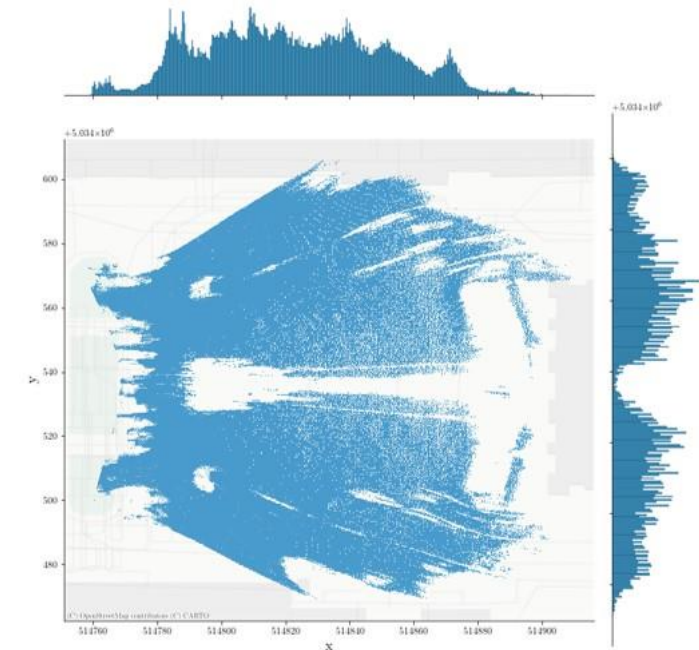

## Trajectory Data Mining

- ☐ Trajectory distribution map
- ☐ Trajectory clustering
- ☐ Groups detection

# 3 - Results

---

Occupancy  
*pedestrian/cell*

Density  
*pedestrian/squared meter*

Flow Rate  
*pedestrian/minute/meter*

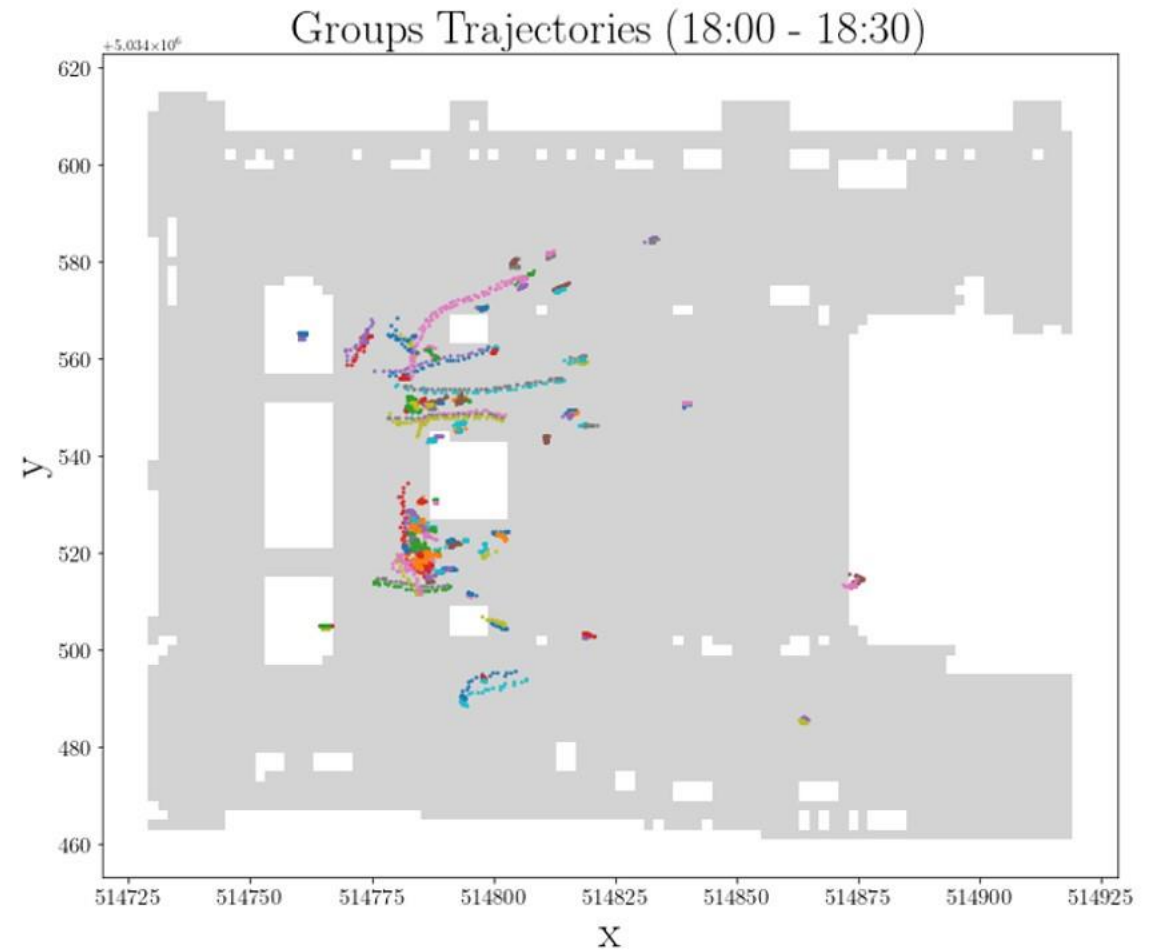

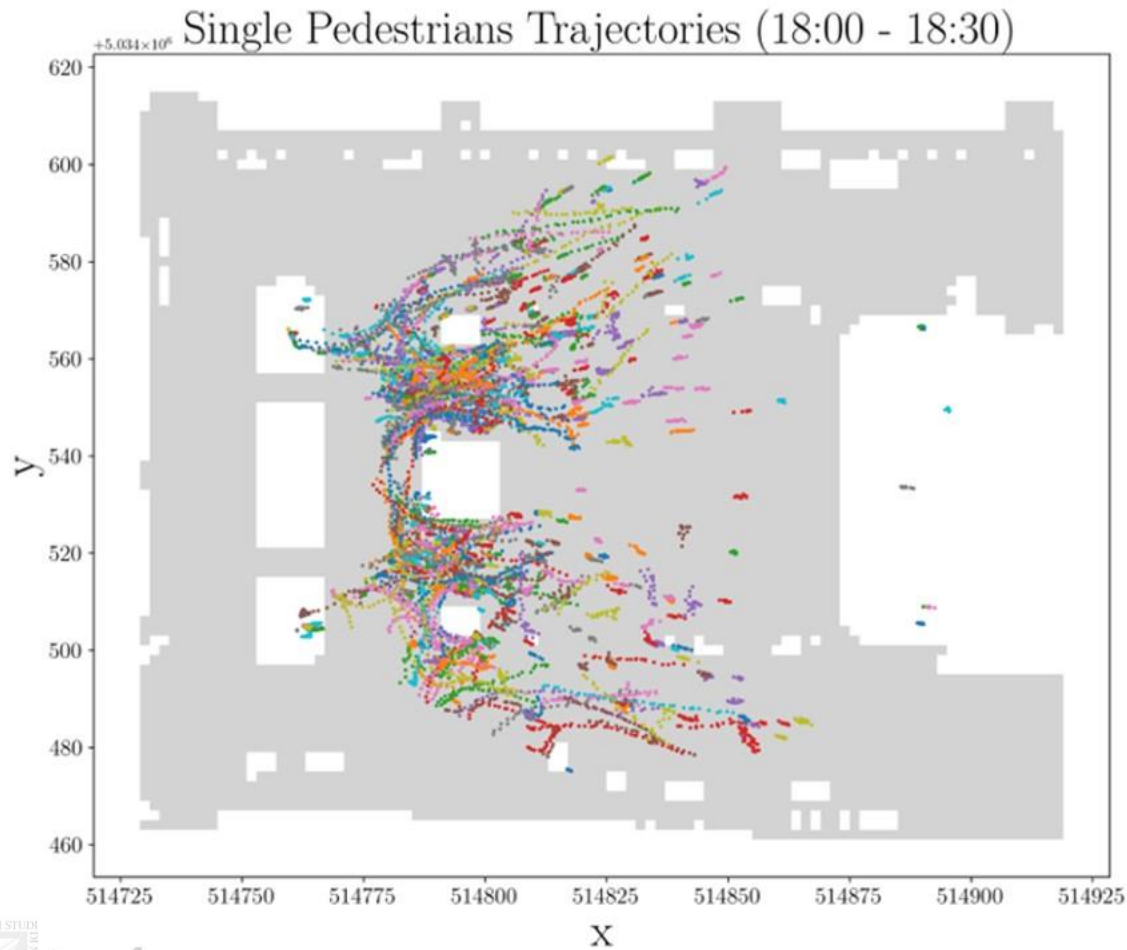

*K-Means ( $k = 2$ )*

*Distance, Duration, Speed, Direction*

*Proxemic (1.5 m)*

*Close start/end points (4 m)*

# 4 - Conclusions and Future Work

---

## Conclusions

- ☐ Promising role of computer vision techniques in urban analysis
- ☐ Usefulness of object detection model training in achieving greater accuracy
- ☐ Difficulty in scenarios with crowded areas and small-size pedestrians
- ☐ Metrics more suitable for transport engineering

## Future Work

- ☐ Definition of new metrics
- ☐ Object tracking model training
- ☐ Use of pedestrian micro-simulations
- ☐ Manual annotation of the available dataset
